PART I

Digital technology advancements, digital disruption, and digital business transformation 1

1 Introduction and need for this book 3

<i>Introduction</i>	3
<i>Need for this book</i>	4
<i>Research for this book</i>	5
<i>How to use this book</i>	7

2 IT, information systems, strategic information systems, and digital technologies 10

<i>Introduction</i>	10
<i>Information systems</i>	10
<i>Information technology and information communications technology</i>	14
<i>Strategic information systems and digital technologies</i>	15
<i>Implications for accountants</i>	16

3 Digital technology advancements and digital disruption: game-changing opportunities and existential threats 19

<i>Introduction</i>	19
<i>Digital technology advancements and digital disruption</i>	19
<i>Unpacking digital disruption</i>	21
<i>Existential threats and game-changing opportunities</i>	23
<i>Implications for accountants</i>	26

4 Digital business, the digital business imperative, and digital business transformation	29
<i>Introduction</i>	29
<i>Digital business</i>	29
<i>The digital business imperative</i>	33
<i>Digital business transformation</i>	33
<i>Implications for accountants</i>	35
 PART II	
Digital disruption and digital transformation of accounting	41
 5 Digital disruption and digital transformation of accounting	43
<i>Introduction</i>	43
<i>Digital disruption of accounting</i>	43
<i>Disruption and transformation of the accounting value proposition</i>	50
<i>Disruption and transformation of accounting functions</i>	52
<i>Digital technology advancements anticipated to have a profound direct impact on accounting</i>	63
<i>Implications for accountants</i>	72
 6 Impact of digital disruption and digital transformation on accountants	77
<i>Introduction</i>	77
<i>Impact of digital disruption and digital transformation on accountants</i>	77
<i>New or enhanced roles and activities required of accountants</i>	78
<i>IFAC future-fit accounting roles</i>	81
<i>ACCA future career zones</i>	85
<i>New or enhanced digital technology competencies required of accountants</i>	87
<i>An organizing framework for accounting technology competencies</i>	96
 PART III	
Leveraging digital technologies to thrive in the digital era: roles of accountants in organization digital business capabilities	109
 7 The role of accountants in digital transformation strategy, digital business strategy, digital innovation, digital learning, adaptability, and agility	111
<i>Introduction</i>	111
<i>The role of accountants in digital business strategy and digital transformation strategy</i>	111
<i>The role of accountants in digital innovation</i>	115
<i>The role of accountants in organizational digital learning</i>	117
<i>The role of accountants in organizational adaptability, agility, and ambidexterity</i>	119

8 The role of accountants in digital customer engagement, digital stakeholder engagement, and digital customer experience	125
<i>Introduction</i>	125
<i>Required accounting roles and competencies for digital customer engagement and digital stakeholder engagement</i>	125
<i>Required accounting roles and competencies for digital customer experience</i>	129
9 The role of accountants in enterprise architecture, technology sourcing, data analytics, data science, and data management	133
<i>Introduction</i>	133
<i>Required accounting roles and competencies for enterprise architecture management</i>	133
<i>Required accounting roles and competencies for technology sourcing</i>	138
<i>Required accounting roles and competencies for data management, data science, and data analytics</i>	139
10 The role of accountants in cybersecurity, information privacy, and digital ethics	144
<i>Introduction</i>	144
<i>Required accounting roles and competencies for cybersecurity</i>	144
<i>Required accounting roles and competencies for information privacy and other digital ethics issues</i>	148
11 The role of accountants in digital leadership, accelerated change and transformation, digital risk management, and digital governance	154
<i>Introduction</i>	154
<i>Required accounting roles and competencies for digital leadership</i>	154
<i>Required accounting roles and competencies for accelerated change and transformation</i>	158
<i>Required accounting roles and competencies for digital risk management and governance</i>	159
PART IV	
Keeping up with digital technology advancements	165
12 Keeping up with digital technologies	167
<i>Introduction</i>	167
<i>Importance and challenge of keeping up with digital technologies</i>	167
<i>Common strategies and practices for keeping up with digital technologies</i>	168
<i>Strategies and practices from the research on technological knowledge renewal effectiveness</i>	168
<i>Strategies and practices from practitioners</i>	170
<i>Implications for accountants</i>	177

PART V

Digital technologies deep dive	181
13 Data, data management, data analytics, and data science technologies	183
<i>Introduction</i>	183
<i>Data</i>	184
<i>Big data</i>	186
<i>Data management</i>	188
<i>Business intelligence and business analytics</i>	188
<i>Data analytics and data science</i>	189
<i>Data visualization</i>	191
14 Internet of things (IoT) technologies	197
<i>Introduction</i>	197
<i>The internet of things and the internet of everything</i>	198
<i>Smart buildings, smart workspaces, and smart homes</i>	203
<i>Smart infrastructure, smart cities, and smart government</i>	205
<i>Risks and other issues</i>	207
15 Artificial intelligence technologies	211
<i>Introduction</i>	211
<i>Artificial intelligence and machine learning</i>	212
<i>Knowledge graphs, neural networks, and deep learning</i>	214
<i>Natural language processing, speech recognition, and computer vision</i>	216
<i>Common AI issues and risks</i>	218
16 Video analytics, computer vision, and virtual reality technologies	221
<i>Introduction</i>	221
<i>Video analytics and computer vision</i>	221
<i>Virtual reality, augmented reality, and mixed reality</i>	224
<i>Business value of VR, AR, and MR</i>	226
17 Robotics, drones, and 3D / 4D printing technologies	232
<i>Introduction</i>	232
<i>Robots and robotics</i>	232
<i>Drones</i>	236
<i>3D and 4D printing</i>	240
<i>Issues and challenges</i>	243
18 Network and connectivity technologies	251
<i>Introduction</i>	251
<i>6G, 5G, 4G, LTE, and other cellular networks</i>	251

<i>GPS III, GPS Block III, and low earth orbit (LEO) satellites</i>	254
<i>NB-IoT, LTE Cat-M1, LoRaWAN and other low-power wide-area network technologies</i>	256
<i>NFC, Smart Bluetooth, iBeacon, and other communication protocols</i>	258
19 Blockchain and other distributed ledger technologies	265
<i>Introduction</i>	265
<i>Distributed ledger technology (DLT)</i>	266
<i>Blockchain</i>	267
<i>Types of blockchain</i>	269
<i>Blockchain applications and use cases</i>	270
<i>Blockchain use cases in accounting</i>	273
<i>Risks and issues</i>	275
 <i>Index</i>	 279

Figures

2.1	Components of an information system	11
2.2	Types of information systems, including example systems and example users	14
3.1	Digital technology advancements cause digital disruption but can be leveraged to respond to disruption and recreate value offerings and capabilities	20
3.2	Kodak failed to effectively respond to disruption from digital cameras and smartphones, despite creating the technology behind them	24
4.1	Digital business maturity models, like this one, attempt to map where an organization is along various digital business capabilities or outcome areas	32
4.2	Digital business transformation is not just about using digital technologies; it is also about changing organization structures, overcoming change barriers, and managing both digital risks and change risks	35
5.1	Some researchers are proposing the inclusion of an accounting information systems course or unit in undergraduate accounting degrees focusing on these identified AIS competency areas	49
5.2	AI and cognitive technologies, drones / robotics, and PPA / RPA can be combined to give robots / drones the human-like ability to do inventory counts / verifications	53
5.3	Data mining methods and tools offer new and potentially more efficient / effective ways to do both retrospective and prospective analysis and reporting	55
5.4	Data analytics and data science methods and techniques now being applied to different audit procedures / activities	59
5.5	Cloud computing service models and example vendors	64
6.1	ACCA future career zones	85
6.2	Digital technology competencies within the AAA and IMA accounting competency framework	88
6.3	The design thinking process and some of each stage's objectives, artefacts, and outputs	91
6.4	The Cynefin framework is one of several frameworks that can be used by individuals and organizations to make sense of information and events in complex settings	95
6.5	Accounting digital technology competencies	97
7.1	Digital business requires new organizational capabilities or digital enhancements of traditional capabilities to achieve the same or enhanced aims to traditional business	112

8.1	Traditional customer engagement vs. digital customer engagement	126
8.2	A research-derived taxonomy of digital customer engagement practices	127
9.1	Example enterprise architecture governance model	137
10.1	NIST cybersecurity capability functions and practices	147
11.1	Results of a survey of 3,300 <i>MIT Sloan Management Review</i> readers, Deloitte Dbriefs webcast subscribers, and other interested parties, regarding what is different about working in a digital business environment	155
11.2	Results of a survey of 3,300 <i>MIT Sloan Management Review</i> readers, Deloitte Dbriefs webcast subscribers, and other interested parties, regarding the most important skill leaders need to succeed in a digital workplace	156
11.3	Having working knowledge of accelerated change and transformation methodologies like the Change Acceleration Process can be an invaluable tool in digital leaders' rapid change and transformation tool arsenal	158
13.1	An example of different types of data	185
13.2	Example of sources of big data	187
13.3	Data management, business intelligence, business analytics, and data science overlaps	190
14.1	The internet of everything extends the internet of things by connecting people, processes, data, and things	199
14.2	Edge computing brings computation and data storage to the locations where they are needed, instead of requiring sensor data to be sent to the cloud and waiting for the cloud to send the results of computation back to the location	201
15.1	Part of a knowledge graph showing information about key figures in US politics at a point in time	215
15.2	A simple neural network vs. a deep learning neural network	216
15.3	Computer vision can enable self-driving cars to "see" better than humans	217
16.1	An example of VCA / computer vision software developed by Voxel51	222
16.2	An example of VCA / computer vision software recognizing both people and actions/events	223
16.3	Using a HoloLens 2 headset	226
17.1	Components of a drone	237
17.2	NASA's proposed space for drone operation: below aircraft space and above suburban infrastructure and dwellings	239
17.3	Anatomy of a basic 3D printer	241
18.1	How cellular phones work	252
18.2	Low earth orbit (LEO), medium earth orbit (MEO), and highly elliptical orbit (HEO)	255
18.3	An NFC-enabled phone sets up a current, the NFC tag receives the "induced current", and, recognizing it is a valid signal, offers connection to the phone and begins data transfer	258
19.1	Each blockchain block contains some data, the hash of the block, and the hash of the previous block	267
19.2	A chain of blocks, with each block other than the genesis block having the hash of the previous block	267
19.3	The funds transfer process in a traditional digital ledger vs. in a blockchain network	273

Tables

1.1	Key literatures reviewed at each research stage for this book and the focus of each literature review	6
5.1	Example digital technology tools used to automate audit tasks	48
5.2	Example applications of RPA in the finance function	69
5.3	Current AI applications as reported by the big four accounting firms	70
6.1	Examples of different corporate accelerator models and their structures, objectives, and characteristics	93
7.1	Impact of digital technology advancements on digital innovation and examples of opportunities that can be leveraged	116
7.2	Google and reflect	121
8.1	Google and reflect	131
9.1	Example enterprise architecture management activities, tasks, and artefacts	135
9.2	Benefits of effective enterprise architecture management	136
9.3	Google and reflect	141
10.1	Ten messages for global leaders from the 2019 World Economic Forum annual meeting on cybersecurity	146
11.1	Google and reflect	161
12.1	Top learning tools sorted alphabetically by learning tool type and their change in ranking from year to year – part 1	171
12.2	Top learning tools sorted alphabetically by learning tool type and their change in ranking from year to year – part 2	172
12.3	Top learning tools sorted alphabetically by learning tool type and their change in ranking from year to year – part 3	172
13.1	Data-related roles and type of expertise	190
13.2	Google and reflect	191
13.3	Example tools and vendors	192
14.1	Cities around the world and their smart city maturity (e.g. if they have a smart city roadmap or smart city department, and the presence of key smart city domains or application areas)	206
15.1	Types of AI, their capabilities, and implications for human beings	213
16.1	Google and reflect	228
17.1	Google and reflect	244
17.2	Example tools and vendors	244
17.3	Discussion questions	245
18.1	Types of satellite or orbit, and what they are used for	256

18.2	Google and reflect	260
18.3	Example tools and vendors	260
18.4	Discussion questions	261
19.1	Blockchain opportunities and challenges for auditing	274
